

VOICE IMPEDIMENTS

The root of almost all vocal defects lies within the **vocal organ**.

Perfect Voice Institute realises that there are other contributing factors that may cause speech impediments such as emotional and other physical or mental conditions.

The **perfect voice method** specialises in the restoration and repair of the precise muscles that controls the vocal organ. The muscles that are designed for perfect vocal action often lack in strength thus causing the over powering *voice-killer* muscles or *emergency* muscles to develop and compensate.

The basis for correct vocal action lies within the **development as well as the isolation of the combined palate and hyo-glossus attack**. The hyo-glossus can either be completely inactive as observed in lisping or it can be completely out of control, rigid and arched as in most cases of stuttering.

Hoarseness, huskiness, harshness, voice scratchiness and fatigue are all **symptoms of a weak vocal organ**. Most of these symptoms can lead specialists into prescribing medicines for stomach acid (reflux) or nasal drip. These medicines are beneficial and we do acknowledge the existence of these medical conditions however, one has to acknowledge that the condition of the vocal organ in general can give rise to these symptoms.

Please make use of this opportunity to view the amazing vocal animations that will clearly leave no doubt to the fact that the perfect voice method is **the only successful leading method in voice betterment**.
